

Introducing the Computational Economics “Algorithmic Repository and toolKit” github.com/econ-ark

Presentation by Chris Carroll and Matthew White at
NBER Summer Institute “Micro to Macro” Working Group

July 17, 2017

Do for HA Macro What DYNARE Did for RA

Do for HA Macro What DYNARE Did for RA

Provide state-of-the-art set of tools for:

Do for HA Macro What DYNARE Did for RA

Provide state-of-the-art set of tools for:

- 1 Solving dynamic stochastic optimization problems

Do for HA Macro What DYNARE Did for RA

Provide state-of-the-art set of tools for:

- 1 Solving dynamic stochastic optimization problems
 - 'Hard' Bellman problems with uncertainty, 'kinks,' nonconvexities

Do for HA Macro What DYNARE Did for RA

Provide state-of-the-art set of tools for:

- ① Solving dynamic stochastic optimization problems
 - 'Hard' Bellman problems with uncertainty, 'kinks,' nonconvexities
- ② Simulate behavior of populations of agents

Do for HA Macro What DYNARE Did for RA

Provide state-of-the-art set of tools for:

- ① Solving dynamic stochastic optimization problems
 - 'Hard' Bellman problems with uncertainty, 'kinks,' nonconvexities
- ② Simulate behavior of populations of agents
 - Whether or not they are solving DSOP

Do for HA Macro What DYNARE Did for RA

Provide state-of-the-art set of tools for:

- ① Solving dynamic stochastic optimization problems
 - 'Hard' Bellman problems with uncertainty, 'kinks,' nonconvexities
- ② Simulate behavior of populations of agents
 - Whether or not they are solving DSOP
- ③ Finding equilibria for markets/economies populated by such agents

Goals

Make it *much* easier:

Make it *much* easier:

- To get started doing structural HA modeling

Make it *much* easier:

- To get started doing structural HA modeling
- To teach (with hands-on, problem-set-assignable exercises)

Make it *much* easier:

- To get started doing structural HA modeling
- To teach (with hands-on, problem-set-assignable exercises)
- To *compare* models to each other

Make it *much* easier:

- To get started doing structural HA modeling
- To teach (with hands-on, problem-set-assignable exercises)
- To *compare* models to each other
- To add new capabilities

Make it *much* easier:

- To get started doing structural HA modeling
- To teach (with hands-on, problem-set-assignable exercises)
- To *compare* models to each other
- To add new capabilities
- To mix-and-match components/modules/agent types

Make it *much* easier:

- To get started doing structural HA modeling
- To teach (with hands-on, problem-set-assignable exercises)
- To *compare* models to each other
- To add new capabilities
- To mix-and-match components/modules/agent types

Make it *much* easier:

- To get started doing structural HA modeling
- To teach (with hands-on, problem-set-assignable exercises)
- To *compare* models to each other
- To add new capabilities
- To mix-and-match components/modules/agent types

Remove the excuse 'Structural model was not worth the effort'

Now: HA Structural Modeling Is Alchemy Not Chemistry

... for outsiders:

Now: HA Structural Modeling Is Alchemy Not Chemistry

... for outsiders: Magic (done by mages!)

Now: HA Structural Modeling Is Alchemy Not Chemistry

... for outsiders: Magic (done by mages!)

- This is unfair: Alchemists *tried* to hide their methods

Now: HA Structural Modeling Is Alchemy Not Chemistry

... for outsiders: Magic (done by mages!)

- This is unfair: Alchemists *tried* to hide their methods

Now: HA Structural Modeling Is Alchemy Not Chemistry

... for outsiders: Magic (done by mages!)

- This is unfair: Alchemists *tried* to hide their methods

Need to make it 'normal science':

Now: HA Structural Modeling Is Alchemy Not Chemistry

... for outsiders: Magic (done by mages!)

- This is unfair: Alchemists *tried* to hide their methods

Need to make it 'normal science':

- Transparent, reproducible

Now: HA Structural Modeling Is Alchemy Not Chemistry

... for outsiders: Magic (done by mages!)

- This is unfair: Alchemists *tried* to hide their methods

Need to make it 'normal science':

- Transparent, reproducible
- *easy* (not hard) to 'stand on the shoulder of giants'

... because C collapse vastly exceeds what can be explained by traditional macro variables (wealth, credit supply, ...)

It's a Quantitative Theory question:

- *How Big* would increase in σ_ψ^2 need to be to generate *entire* observed *C* collapse?

It's a Quantitative Theory question:

- *How Big* would increase in σ_ψ^2 need to be to generate *entire* observed *C* collapse?

It's a Quantitative Theory question:

- *How Big* would increase in σ_ψ^2 need to be to generate *entire* observed *C* collapse?
- If answer is absurd, maybe we have to look elsewhere

Exercise:

- Take Carroll, Slacalek, Tokuoka, and White (2017, Forthcoming) model in ARK

Exercise:

- Take Carroll, Slacalek, Tokuoka, and White (2017, Forthcoming) model in ARK
- Traditional calibration (from Carroll (1992)!) so hands are tied

Exercise:

- Take Carroll, Slacalek, Tokuoka, and White (2017, Forthcoming) model in ARK
- Traditional calibration (from Carroll (1992)!) so hands are tied
- Ask 'how much of an increase in σ_{ψ}^2 would explain entire C collapse'?

Exercise:

- Take Carroll, Slacalek, Tokuoka, and White (2017, Forthcoming) model in ARK
- Traditional calibration (from Carroll (1992)!) so hands are tied
- Ask 'how much of an increase in σ_{ψ}^2 would explain entire C collapse'?

Exercise:

- Take Carroll, Slacalek, Tokuoka, and White (2017, Forthcoming) model in ARK
- Traditional calibration (from Carroll (1992)!) so hands are tied
- Ask 'how much of an increase in σ_{ψ}^2 would explain entire C collapse'?

... over to MNW!
